

Multi-Application Cold Shrink Kit Solution for 3/8" Cable with 4.3-10 Connectivity and Ericsson RRU Power Connector: New Product

Global Communication

CommScope has expanded its cold shrink product line with a new kit number CS-PWRCN for weatherproofing two new applications. First is an emerging application for 3/8" cables with 4.3-10 connectors. Small cells are seeing wider use of 3/8" Sureflex jumpers and this new cold shrink is an ideal solution where space is very limited and excellent aesthetics are required. Second is the power/cable connector for Ericsson RRUs where this particular cold shrink is the only product approved by AT&T for the application.

Product Highlights

- Small cell applications: Weatherproofs 3/8" cables with 4.3-10 connectors to antennas & devices
- Macro cell application: Weatherproofs power connector on Ericsson RRUs
- Clean aesthetics for zoning considerations

Cold shrink is a widely accepted weatherproofing method that includes an open-ended rubber sleeve which is factory expanded on a removable core. As you unwind the core, the tube shrinks and conforms to the interface maintaining constant compression which prevents moisture from entering the sealed connection.
