

CommScope
Infrastructure Academy

The CommScope Infrastructure Academy leverages CommScope's proven expertise, knowledge and experience to deliver a comprehensive range of resources to help organizations achieve the highest-quality design and installation. We provide certifications and training services that are recognized throughout the world.

The infrastructure is the foundation of any network. It's vital to performance and reliability. It connects devices, systems and people. Here at CommScope, we provide the network infrastructure solutions that enable our customers, regardless of size, industry or IT budget, to take advantage of business and technology opportunities.

The CommScope Enterprise division, through its SYSTIMAX® and Uniprise® product lines, offers voice, data, video and converged solutions ranging from mission-critical, high-bandwidth and emerging applications to applications that demand unrelenting reliability and quality for everyday needs.

We are proud to have pioneered key developments in wired and wireless network infrastructures for decades and are passionate about educating people about infrastructure solutions. That's why we created the CommScope Infrastructure Academy, a leading provider of training services.

The CommScope Infrastructure Academy leverages CommScope's proven expertise, knowledge and experience to deliver a comprehensive range of resources to help organizations achieve the highest-quality design and installation. We provide certifications and training services that are recognized throughout the world.

Training is key for business development and for improving the skills of any workforce. We're dedicated to supporting our partners and customers but also the industry at large. Our goal is to effectively educate as many people as possible, enabling them to differentiate and demonstrate the capabilities of different infrastructure solutions. Our courses are conducted globally with thousands of students taking part every year.

We provide courses on network infrastructure solutions including twisted pair, fiber, coax and wireless technology. In addition, students have the opportunity to choose from a variety of specialist courses — providing education on the design and installation of the very latest network infrastructure solutions.

From data centers to intelligent buildings, in-building wireless to intelligent infrastructures, enterprise to service providers, our specialist courses take students well beyond their already-detailed foundation training.

Courses are accompanied by online student assessment and provide students with instant feedback. Students can learn at their own pace whenever they choose. In essence, it's training on demand.

Most companies are increasingly concerned about their employees' time and travel costs. The CommScope Infrastructure Academy offers a full and structured curriculum via the Internet in a delivery format that many IT professionals prefer, allowing them to learn online about design and installation best practices and techniques usually reserved for the classroom.

The innovative online format provides an extremely flexible delivery mechanism, and training is time-zone-independent. Courses are accompanied by online student assessment and provide students with instant feedback. Students can learn at their own pace whenever they choose. In essence, it's training on demand.

At the CommScope Infrastructure Academy, more training is available to more people, more often, for a lower investment. CommScope's extensive certification program provides visible and "trackable" qualification of employees, supporting the assessment and verification of credentials at anytime. Furthermore, the reliable accreditation structure is consistent around the world.

At CommScope, we believe that our comprehensive training leads to greater employee motivation, improved skills and enhanced career prospects in the infrastructure industry. And let's not forget — an organization's greatest asset is its workforce.

At the CommScope Infrastructure Academy, we are on a quest for quality through qualification. To learn more about the CommScope Infrastructure Academy or to sign up for an online program or a class in your area, please go to www.commscopetraining.com.
