

## Sealed FDH 4000: New Product

### *Global Communication*

CommScope is pleased to announce the new sealed FDH 4000 Fiber Distribution Hub, now available globally.

The addition of the sealed FDH 4000 to CommScope's existing fiber distribution portfolio, provides customers with a uniquely different option. Unlike traditional cabinets, the FDH 4000 is a sealed hub that can be installed below grade, simplifying complexities in urban deployments, and offering a solution for areas with "line of site" restrictions. The FDH 4000 is ideal for applications requiring security or protection from vandalism, flooding, or severe storms thus minimizing service interruptions.

Packaged in a compact, lightweight enclosure, the FDH 4000 provides a high density solution using two scalable platforms. The all-front access design allows for easier subscriber service and utilization of the F1 feeder fibers by offering more pass-through ports than ever before.

The plug-and-play splitter modules, with optional CWDM's or DWDM's are available separately. These modules come with integrated connectors, to ensure easy installation and promote exceptional fiber management, a hallmark feature of our fiber distribution hubs over the last 15 years.

Accessory kits for pole/wall and strand mounting are available to order separately.

## Installation kits and accessories

Description	Part number
Patch cord for use with sealed FDHs LC/APC to LC/APC 1.2 mm cable, 1 meter	FPCA-MMYP001M
<b>Workstand kits</b>	
for Channel only	FD3-ACCBGSTND
for PenCell only	FD45-ACCBGSTD-P
<b>Pole mount kit</b>	FD45-ACCWMBKT
Collar clamp	301687-000
Strand mount kit (FOSC "D")	663259-000

O-Ring Part number: 429631-000
