

Rapid Faceplate with PnC: New Product

Global Communication

CommScope is pleased to introduce the new Rapid Fiber faceplate with Pull and Click Connector (PnC) for indoor use. This new product addition provides an expansion of the existing fiber faceplate portfolio and significant installation time savings to customers.

CommScope has a long history in wall outlets and uses the latest technologies to deliver unmatched savings in installation time, labor costs and network performance.

The Rapid Fiber faceplate (RFP) incorporates a unique RapidReel fiber spool which allows the cable to payoff directly from the enclosure assembly, therefore providing a quick and simple solution to deploying optical fiber at customer premises.

The installation time is further improved with the new Pull and Click Connector (PnC). This is a pre-terminated connector with housing to be installed on site. In the cable routing phase, it has a small size which allows the connector to route through a 8mm micro conduit. Once the routing is completed, the standard SC housing is attached to mate with any standard SC adapter.

Ordering Information:

Part Number	Detailed Product Description	MOQ
RFP-130S41LC-CS	PnC, SC/APC, 30 meter, Cavity mount	100pc
RFP-160S41LC-CS	PnC, SC/APC, 60 meter, Cavity mount	100pc
RFP-130S41LW-CS	PnC, SC/APC, 30 meter, Wall mount	100pc
RFP-160S41LW-CS	PnC, SC/APC, 60 meter, Wall mount	100pc
