

DAS and small cells: A view from the leading edge (new white paper)

Global Communication

CommScope has released a new white paper comparing the two major alternatives for in-building wireless coverage and capacity, distributed antenna systems (DAS) and small cells.

This concise but informative paper covers:

- What is driving the need for better indoor wireless coverage
- Distributed antenna system architecture and technology
- Small cell architecture and technology
- What are C-RAN small cells
- Advantages and limitations of each solution
- Factors dictating which solution is most appropriate
- Market and technology trends
