

CommScope to partner with Fluke Networks to integrate the SYSTIMAX Link Loss Calculator into handheld fiber testing equipment

CommScope's SYSTIMAX Fiber [Link Loss Calculator](#) (LLC) is an Excel program for installers to enter the number of connectors and fiber lengths into a calculator tool to quickly get the insertion losses for a specific link. Registered partners use this tool to ensure losses are acceptable before requesting an [application assurance](#) solution warranty certificate for an installed fiber cabling. CommScope continues to provide an easy to use [Fiber Performance Calculator](#) interface that integrates the LLC but there is now another option!

Commscope's SYSTIMAX LLC has become standard as part of the latest firmware release for the Fluke Networks' [CertiFiber® Pro Optical Loss Test Set](#) (OLTS). The OLTS improves efficiency of fiber optics certification, simplifying set-up, eliminating errors and speeding up troubleshooting – all in less than one second. The inspection provides automated pass/fail certification to the SYSTIMAX LLC requirements.

The partnership and products, [announced February 5th](#), were kicked off with a Versiv tester give-a-way. Entries into the contest will be available on both company's [websites](#) by downloading a joint whitepaper. The promotion will run through the end of April and the winner will be notified by phone or email. This contest and the products will be available globally, although [restrictions may apply](#).

To become more familiar with the products and better understand the partnership please visit our [Application Assurance landing page](#) at <http://www.commscope.com/assurance>

Additional partnership related questions can be directed to your local sales and support representatives.
