

# FACT optical distribution frame version 2 replaces version 1, May 2018

FACT is CommScope's leading [full front access ODF-platform](#).

- On May 31, 2018 CommScope will discontinue to offer the current FACT-version.
- After May 31, 2018 customer orders for the current FACT-version will be no longer accepted.
- In May 2018 CommScope will launch FACT V2, replacing the current version.

This new FACT release will combine the current best in class useable density, user friendliness, robustness and modularity with new features like transparent blue fiber protection lids, two additional FOP tube termination positions, and with a color change for the side components for cable terminations or fiber guidance from orange to dark grey.

Overall form fit and function, installation methods, modular design, packaging, etcetera, ..., will remain unchanged.

The new FACT V2 release will be offered in the same four chassis types as available today: patch/patch, patch/splice, splice only and the recently released chassis for CommScope's NG4access connectivity packs.

The new material ID's and descriptions for the FACT V2 series will be made available in April 2018. This will provide, at minimum, a six-week window to migrate all customer contracts from current FACT to FACT V2 material ID's. Cross reference lists will be provided to support this exercise.

Please contact your local sales & support representatives for additional information.
