

LSZH 1.2 mm Cable Patch Cords: New Product

EMEA Communication

Today's networks are utilizing more and more fiber. This ever expanding growth of fiber in the network is straining the capacity of vertical and horizontal fiber management systems used in the network today. To help solve the cable congestion issues seen in networks around the world, CommScope (CCS) is introducing the revolutionary 1.2 mm cable patch cords LSZH. Available with LC connector, CCS's new 1.2 mm patch cords require half the space of traditional 1.8 mm patch cords and a third of the space of traditional 2.0 mm patch cords. In environments where space constraints and cable routing prove most challenging, the 1.2 mm patch cords offer the necessary flexibility and quality to realize significant labor and cost savings for service providers.

- LC/UPC and LC/APC connector versions
- Reduced Bend Radius fiber
- LSZH cable
- Compatible with industry standard fiber cable and LC connectors
- Low friction jacket that facilitates the laying of cables
