

A.I.M.O.S. Release V3.2

Introduction: Product Update

Now available

The latest A.I.M.O.S. version contains new features as described below and several fixes that will solve customer issues. For more details, see the Release Note.

New Features include:

3rd Party Equipment Monitoring (ping, HTTP, SNMP)

It is now possible to monitor IP based devices as generic devices in A.I.M.O.S. with the help of the A.I.M.O.S. Scheduler (ping, HTTP). Devices with an SNMP agent can be monitored after loading a customized software plug-in into A.I.M.O.S. V3.2.

Event History Viewer

Events sent by network elements to A.I.M.O.S via SNMP are now shown in the Event History Viewer. For troubleshooting cases, alarm events can be included in the table in order to have a full sequential view of messages for the particular network element.

Era and ION-E Password Management with Scheduler (ION-E V2.4.2 or higher)

For improved security, the passwords of Era and ION-E user accounts can be centrally changed with the A.I.M.O.S. Scheduler.

New Era Hardware Support (CDD, CAP)

The CPRI interface card and all CAP variants can be now integrated and managed in A.I.M.O.S.

New XML Export for Server Migration/ Consolidation

With A.I.M.O.S. V3.2, it will be easy to merge distributed A.I.M.O.S. Management instances to a single instance. A new XML-based device export / import was created for this purpose.

Ordering Information:

| Part Number | Description |
|-------------|--|
| 7768707-02 | A.I.M.O.S. V3.2 Perpetual License |
| 7715695 | A.I.M.O.S. V3.x Subscription License |
| 7822635-00 | A.I.M.O.S. V3.0 update to V3.2 (One Time Jump within V3) |
| 7812329-00 | A.I.M.O.S. Plug-In Cobham ODAS |
