

HELIAX® LSF2 Low Loss Super Flexible Assembly: New Product

Announcing the release of the HELIAX® SureFlex® LSF2, CommScope's new low loss super flexible RF assembly specifically designed for the demands of today's Metro Cell and future 5G applications.

Small Change. Big Difference.

The LSF2 cable assembly pushes the boundaries for what is possible in small cell site deployments by combining big performance with a smaller footprint that is ideal for tight spaces. This new coaxial jumper design sets a new standard for insertion loss performance in a smaller, more flexible cable that maximizes cable routing and connection density. The LSF2 also has a smaller bend radius which allows for easier cable routing within small enclosures without sacrificing performance — bringing the best of both worlds to small cell deployments. The cable assemblies are tested to wide band support, including 5G.

LSF2 Features:

- Patented design
 - Optimized for small cell application and tested up to 6 GHz
- High Performance
 - Electrical characteristics meet or exceed your link budget needs
- Superflexible and compact
 - For easy routing in tight spaces
