

# Indoor LSZH Rollable Ribbon Fiber Cables: New Product

CommScope introduces indoor LSZH rollable ribbon cables into its already extensive portfolio of rollable ribbon cables. Featuring rollable ribbons, these cables provide double the density of standard matrix ribbon cables. Much higher fiber counts can now be used in existing duct banks, avoiding expensive construction. Data center overhead or underfloor pathways are less congested, avoiding or postponing expensive pathway additions.

- Double the fiber density of standard matrix flat ribbons
- Smaller, lighter cables facilitate cable management
- Enjoy the benefits of mass fusion splicing
- No preferential bend like exists with matrix ribbons
- Easy separation by hand for furcation and single-fiber connectorization
- Indoor cables carry dual OFNR and LSZH flame ratings, allowing a single cable to be used globally
- Indoor cables are CPR listed, required for use in the European Union

## Ordering Information:

Please visit the CommScope eCatalog at [www.commscope.com](http://www.commscope.com)  
Select Products -> Cables -> Fiber Cables -> Fiber Indoor Cables  
Click on link to eCatalog: [Indoor/Outdoor Fiber Cables](#)

Cables will have a description similar to: N-[fiber count]-CN-RR-F12YL/8G/99G
