

# HOME CONNECT® Passive Gateway: New Product

The Home Connect® Passive Gateway is one convenient device with two distinct capabilities. It separates the Access RF network from the Home MoCA® network while allowing communication between the two for a seamless customer experience.

- "Engineered to provide maximum RF and MoCA performance"
- The machined "F" ports -with an innovative four-sided contact- provide excellent retention and electrical performance
- The zinc die cast body holds a soldered back for superior RF shielding

The raised body allows moisture to drain behind the unit and uses a priority plating for use in harsh environments
