

MST/MHT/Fiber Indexing Terminals Series: New Product Packaging

CommScope recently announced product enhancements for Mini-MST terminals and the Mini-MST Fiber Indexing Terminals. These enhancements included the replacement of the over mold boot with heat shrink tubing and introduced a new spool design. Packaging of shorter length stubs were modified to provide additional protection of the terminal and cable coil in cardboard boxes. Packaging improvements were also recently implemented for the MHT terminals resulting in changes to MOQ for shorter lengths. MST 2xN and 4x3 terminals with full-size adapters were not affected by these changes.

Packaging/MOQs for Terminals

- Mini-MST
Order multiple of 2 units for terminals with stub length shorter than 300ft
- Mini-MST Indexing
Order multiple of 2 units for terminals with stub length shorter than 100ft; terminals with longer lengths are spooled
- MHT
Order multiple of 2 units for terminals with stub length shorter than 300ft.
- MST 2XN
No changes in packaging or order multiple
- MST 4x3
New spool design; no changes in order multiple
