

Introducing Connected Lighting for Office

For deep renovation and new-build offices where there is a need to improve **total building efficiency and employee productivity**

Philips PoE Connected Lighting provides real-time and historical occupancy data through sensors integrated in every luminaire to corporate real estate professionals. In combination with **partner applications**, this data can be used to **optimize the way the building is used**.

Additionally Philips Personal Control App and SDK/APIs provide potential for **increased productivity** with an app to localize an employee and change the light and temperature levels. Via **partner applications** employees can find available meeting rooms, conference rooms & people as well.

Transforming this lighting platform to a single infrastructure in the ceiling for high density of sensors, cameras, access points, antenna systems and more **saves capex, energy, space** and **improves productivity** to help you achieve your sustainability and business goals

Give us a call to discuss how we can help you shape your Smart Building.
