   - SELECT APPROPRIATE PORT TO BE UTILISED ON SUPPORT BRACKET AND BREAKOUT PLASTIC COVER
   - NOTE RFP REMOVED FOR PICTURE CLARITY

---

Infrared radiation is invisible and can seriously damage the retina of the eye. Do not look into the ends of any optical fibre. Do not look directly into the optical adaptor. Exposure to invisible laser radiation may result. A protective cap or hood must be immediately placed over any radiating adapter or optical fibre connector to avoid the potential of dangerous amounts of radiation exposure. The practice also prevents dirt particles from entering the connector and adapter.

5. Managing the cable within the wall box
   Secure the cable to the mounting bracket

   - Feed cable into foam slot and anchor using a cable tie.
   - Cut a small piece of adhesive foam provided.
   - Attach foam to cable in preparation for anchoring to face plate.

6. Securing the face plate
   Push the face plate into the support bracket aligning the face plate with the support bracket.

   - Ensure cable is located at the top of the spool.
   - Secure cable with cable tie provided.

7. Hauling eye removal
   After the required cable is paid out, remove the pulling eye as shown.

   - Lift up the retention tab located at the top of the connector.
   - Pull the body of the connector back to release the dust cap.

8. Final Fixing and Closedown
   Secure face plate to support bracket using 2 screws provided.

   - Assemble cover to complete the installation.
