

PIM-GUARD-MOUNTS

Base Product

PIM-Guard Series High Capacity Monopole and Tower Sector Frames

Passive intermodulation (PIM) presents a constant challenge to wireless network performance—especially given today's crowded tower tops. That's why CommScope created several innovative new mount solutions to reduce PIM between remote radio units (RRUs) and base station antennas (BSAs) on the tower.

-RHDX Series tower and monopole mounts: These feature an extended 10-foot spine design that provides radio mounting locations farther away from antennas

-RHDXL Series tower mounts: All the features and benefits of the RHDX extended spine, plus a PIM-optimized frame to increase antenna-to-antenna spacing—reducing PIM further

Product Classification

Product Type	PIM-guard mount
Product Brand	PIM-guard
Product Series	G2
