PARTS LIST	
QTY	DESCRIPTION
1	PANEL (1RU, 1.5RU OR 3RU)
1	23IN BRKTS & CBL TIE-OFF KIT
2	PANEL DOORS
1	QUICK START INSTRUCTIONS

**Required tool**

TX20 TORX SCREW-DRIVER

NOTE:
All pictures in these instructions show the 1.5RU panel as a reference.
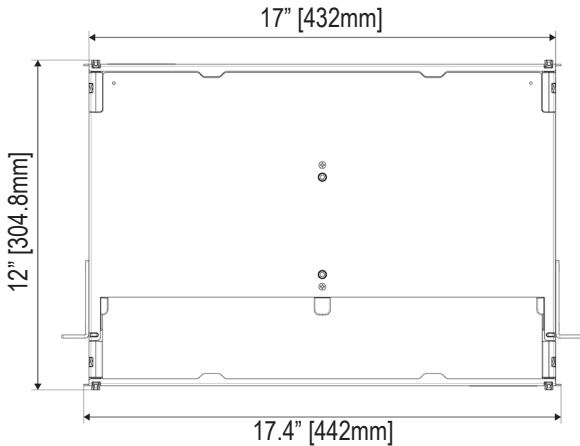

1 Removing panel from the box
Open the box and remove the panel and other items from the box. Check the parts list to ensure all items are present. Obtain the required tool indicated only when moving the mounting brackets.

3 Installing the doors
There are 2 identical doors. One for the front and one for the rear of the panel. Take a door and hold it horizontal with the port numbering label pointing upwards. Stand in front of the panel and click both hinge pieces into the sides of the panels as indicated here. Repeat the process to install the other door in the rear of the panel.

x2

4 Panel mounting options
2" Offset position
Panels come with 19" brackets pre-mounted in 2" offset.

5" Offset position
To mount the brackets at 5" position remove all screws with which the brackets are installed and remount the brackets using the holes located 3" back on the panel.

2 Overall dimensions of the panels (after assembly)
The overall width and length of the panels is shown in the picture below.

17" [432mm]
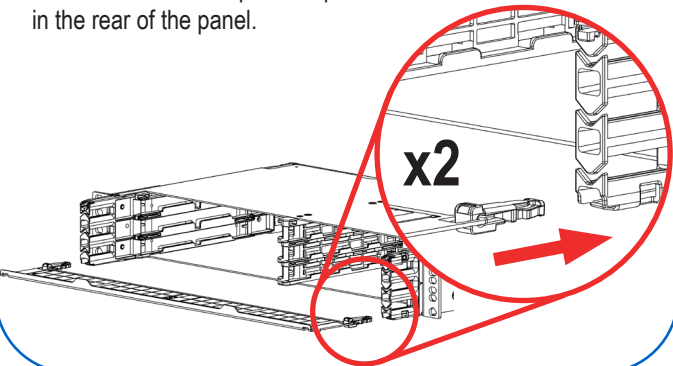

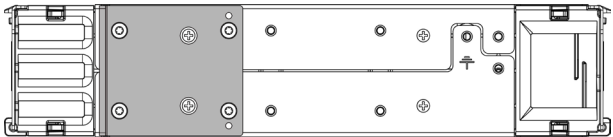

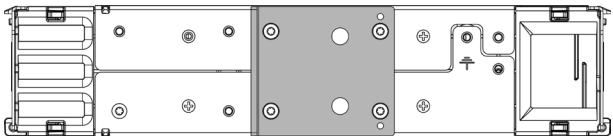

12" [304.8mm]

17.4" [442mm]

The overall width of the panels, including the mounting brackets, is 19" [482.6mm] or 23" [584.2mm] depending on which brackets are installed. The height of the panels can be found in this table:

PANEL HEIGHTS	
1RU	1.75" [44.45mm]
1.5RU	2.62" [66.55mm]
3RU	5.25" [133.35mm]

23" Mounting brackets
The panels come with 19" brackets which can be swapped for 23" brackets if necessary (refer to the mounting kit). To replace the brackets simply remove all screws from the 19" bracket, install the 23" and re-tighten all screws in the same positions. If a different offset is required.
