Installation Instructions

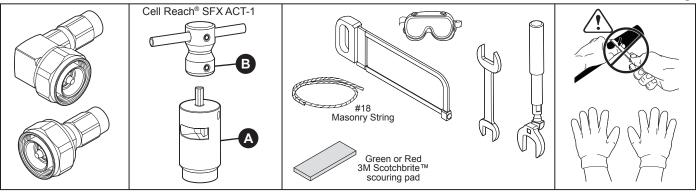

Connector Preparation

for SFX Straight and Right Angle A-Series Connectors

Bulletin 7634140 Revision A Page 1 of 2

Andrew Institute offers installation training.

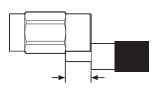

1

Core the cable with the connectorization Tool (**A**). (A high torque, low speed power drill is recommended to core Cell Reach SFX and 540 cables.) Continue coring the cable until it bottoms out at its positive stop and no more material is exiting from the tool. For manual operation, use T-Handle (**B**) provided with coring tool.

ol clean.

IMPORTANT: Confirm proper center conductor length by comparing to connector back nut barrel as shown below.

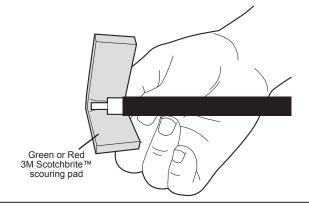

Note: Remember to keep coring tool clean.

2

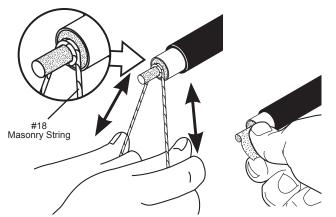

Notice that during the coring process, the outer jacket was removed. This is a normal process with these tools. When the jacket is removed, the exposed center and outer conductors will be coated with adhesive and dielectric material. Clean the outer conductor with a green or red 3M Scotchbrite pad. Completely remove the adhesive.

IMPORTANT: Do not clean the center conductor until the outer conductor has been cleaned.

3

Carefully remove the dielectric material from the center conductor using the #18 Masonry String.

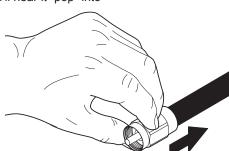

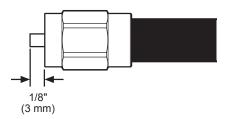

Above illustration depicts a properly prepared cable end.

Slide the back nut onto the cable until it is completely seated. You'll hear it "pop" into

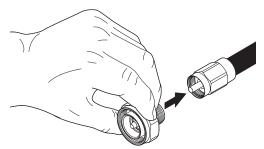

place.

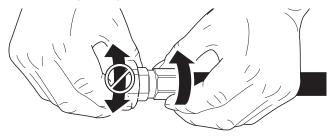

The center conductor should protrude about 1/8 inch (3mm) past the back nut shown below.

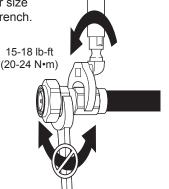

5 Mate the back nut with connector front nut.

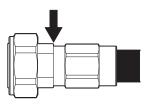

While holding the front nut stationary, turn the back nut to tighten the connector as tight as possible before using wrenches. This is to ensure that the connector does not slide forward during the remainder of the tightening process.

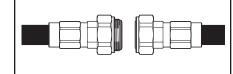

Continue to tighten the connector with proper size wrench and torque wrench.

Important: During the tightening process, make sure that the front nut doesn't turn. Tighten the connector until the O-ring completely disappears and you achieve metal-to-metal contact between the back nut and the front nut.

DIN 18-22 lb-ft (25-30 N·m) N 15-20 lb-in (1.7-2.3 N•m)

表一 有毒有害物质或元素名称及含量标识格式					
有毒有害物质或元素					
铅 (Pb)	汞 (Hg)	镉 (Cd)	六价铬 (Cr6+)	多溴联苯 (PBB)	多溴二苯醚 (PBDE)
Х	0	0	0	0	0
	铅	铅 汞	有:	有毒有害物质 領	有毒有害物质或元素 铅 汞 镉 六价铬 多溴联苯

O: 表示有毒有害物质在该部件所有的均质材料中的含量均在SJ/T 11363-2006规定的限量要求以下. X: 表示该有毒有害物质至少在该部件的某一均质材料中的含量超出SJ/T 11363-2006规定的限量要求
