0.6 m | 2 ft ValuLine® High Performance Antenna, single polarized, 24.250 – 26.500 GHz

Product Classification

Product Type: Microwave antenna
Product Brand: ValuLine®

General Specifications

Antenna Type: VHLP - ValuLine® High Performance Low Profile Antenna, single-polarized
Polarization: Single
Side Struts, Included: 0
Side Struts, Optional: 0

Dimensions
Diameter, nominal: 0.6 m | 2 ft

Electrical Specifications

Gain, Low Band: 41.5 dBi
Gain, Mid Band: 42 dBi
Gain, Top Band: 42.5 dBi
Boresite Cross Polarization Discrimination (XPD): 30 dB
Front-to-Back Ratio: 68 dB
Beamwidth, Horizontal: 1.5 °
Beamwidth, Vertical: 1.5 °
Return Loss: 17.7 dB
VSWR: 1.3
Radiation Pattern Envelope Reference (RPE): 7206D

Electrical Compliance
Brazil Anatel Class 3 | Canada SRSP 325.25 | ETSI 302 217 Class 3 | US FCC Part 101A
Mechanical Specifications

- **Compatible Mounting Pipe Diameter**: 48 mm–120 mm | 1.9 in–4.7 in
- **Fine Azimuth Adjustment Range**: ±15°
- **Fine Elevation Adjustment Range**: ±15°
- **Wind Speed, operational**: 180 km/h | 111.847 mph
- **Wind Speed, survival**: 252 km/h | 156.585 mph

Packaging and Weights

Weight, net
5.75 kg | 12.677 lb

Regulatory Compliance/Certifications

Agency
ISO 9001:2015

Classification
Designed, manufactured and/or distributed under this quality management system

* Footnotes

Operating Frequency Band
Bands correspond with CCIR recommendations or common allocations
Gain, Mid Band

For a given frequency band, gain is primarily a function of antenna size. The gain of Andrew antennas is determined by either gain by comparison or by computer integration of the measured antenna patterns.

Boresite Cross Polarization Discrimination (XPD)

The difference between the peak of the co-polarized main beam and the maximum cross-polarized signal over an angle twice the 3 dB beamwidth of the co-polarized main beam.

Front-to-Back Ratio

Denotes highest radiation relative to the main beam, at 180° ±40°, across the band. Production antennas do not exceed rated values by more than 2 dB unless stated otherwise.

Return Loss

The figure that indicates the proportion of radio waves incident upon the antenna that are rejected as a ratio of those that are accepted.

VSWR

Maximum; is the guaranteed Peak Voltage-Standing-Wave-Ratio within the operating band.

Radiation Pattern Envelope Reference (RPE)

Radiation patterns define an antenna’s ability to discriminate against unwanted signals. Under still dry conditions, production antennas will not have any peak exceeding the current RPE by more than 3dB, maintaining an angular accuracy of +/-1° throughout.

Wind Speed, operational

For VHLP(X), SHP(X), HX and USX antennas, the wind speed where the maximum antenna deflection is 0.3 x the 3 dB beam width of the antenna. For other antennas, it is defined as a deflection is equal to or less than 0.1 degrees.

Wind Speed, survival

The maximum wind speed the antenna, including mounts and radomes, where applicable, will withstand without permanent deformation. Realignment may be required. This wind speed is applicable to antenna with the specified amount of radial ice.

Axial Force (FA)

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

Side Force (FS)

Maximum side force exerted on the mounting pipe as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.

Twisting Moment (MT)

Maximum forces exerted on a supporting structure as a result of wind from the most critical direction for this parameter. The individual maximums specified may not occur simultaneously. All forces are referenced to the mounting pipe.
