SYSTIMAX 360™ iPATCH® G2 Fiber Ultra High Density (UHD) Shelf, LC InstaPATCH® Distribution Panel Instructions

General

The SYSTIMAX 360™ fiber optic shelves, UHD-1U and UHD-2U, are 19-inch (483mm) wide rack mounted, ultra high density (UHD) shelves that accommodate 360 InstaPATCH® distribution modules (DM). The 1U shelf includes one sliding tray that accommodates four distribution modules. The 2U shelf includes three sliding trays that accommodate four distribution modules each for a total of twelve distribution modules. This product is intended for indoor use or can be used outdoors in a suitable protective enclosure.

</table>

Note: Contact your local account representative for ordering numbers for modules or panels.

Important: Limits for iPatch panel connections to panel bus

- iPatch LC fiber shelves are limited to a maximum number of rack units (RUs) and will not support a fully populated rack or cabinet. iPatch LC fiber shelves support 26 rows per rack/cabinet, such as configured for (26) 1U shelves, (13) 2U shelves, (10) 2U UHD shelves, or any combination thereof.

- Limit the chain of iPatch panels connected to each cable bus port to a maximum of five (5) panel bus connectors (including controller). Start a new chain with every 6th connector in the rack system.

CAUTIONS

- Isopropyl alcohol is flammable, and can cause eye irritation on contact. If eye contact occurs, flush with water for at least 15 minutes. In case of ingestion, consult a physician. Use only in well ventilated areas.

- Disconnected optical components may emit invisible optical radiation that can damage your eyes. Never look directly into an optical component that may have a laser coupled to it. Serious and permanent retinal damage is possible. If accidental exposure to laser radiation is suspected, consult a physician for an eye examination.

- Wearing safety glasses during installation of this shelf is recommended. Although standard safety glasses provide no protection from potential optical radiation, they offer protection from accidental airborne hardware and cleaning solvents.
Step 1 – Verify Parts

1. Verify parts shipped with this unit against the parts listed in the table and shown in figure above (2U shelf shown).
   
   **Note:** Remove tray support brackets on both sides of shelf prior to installation for 2U shelves.

Step 2 – Configure Mounting Brackets and Mount Shelf

1. Remove tray support brackets, as shown in Step 1, on both sides of shelf prior to installing 2U shelves.
2. Configure mounting brackets on shelf to match type of equipment rack shelf is being installed on.

   **Note:** Shelf brackets are factory configured for 19-inch (483mm) rack mounting.

**Mount Shelf to Equipment Rack**

3. Align tabs on mounting brackets (two per bracket) with holes on front of equipment rails as shown on next page.
4. Install shelf to front of equipment rails and secure with supplied hardware; four 12-24 x 1/2” screws for 19-inch (483mm) rack and 23-inch (584mm) racks and four M6 x 12 screws for ETSI racks.
5. Snap hardware covers over front of mounting brackets.

Step 3 – Tray Features and Functions

1. Each tray can slide to the front and to the rear. The trays have three positions: home, forward, and rearward and have a built-in mechanism to prevent them from being pulled too far either way.
2. The recommended sequence for populating the trays is 1-3 for the 2U. Tray 1 is at the bottom and tray 3 is at the top.
3. Pull spring plunger to slide a tray to the rear position until the tray stops.
4. Tray can be removed from the front by lifting the spring stop latch located at the right center of the shelf (when viewed from rear) as shown.
Step 4 – Connect Panel Bus Jumper

1. Pull and turn the left spring plunger to the open position, as shown in Step 3.
2. Pull a sliding tray rearward until it stops.
3. Connect the keyed female 10-pin connector on the panel bus jumper into the nearest cable bus port on panel bus as shown.
4. Install spare port built into jumper cordage into panel bus frame by turning it at an angle, inserting into frame, and turning it back perpendicular to frame.
5. Plug each panel bus jumper onto backplane kit and other end to panel bus located on rack. Use provided flat retainer clips to position panel bus jumper routing. **iPatch** kit black ribbon cables are already positioned. **Note:** The connector is keyed. The polarized tab on the jumper connector fits into the opening in the header connector on the panel bus.

**Important:** Make sure that the jumper connector is fully seated in the header connector on the panel bus.
Step 5 – Program the Order of Panels

1. After you have upgraded the shelves in the rack, you should restore power to the imVision controller for the rack and program the order of the panels.
   
   **Note:** For instructions, see the SYSTIMAX® imVision® Controller User Guide (860547876).

Step 6 – iPatch Upgrade Kit Removal

Removing Upgrade Kit

1. Slide tray forward.

2. Use spudger to depress the release tab on one end of the iPatch upgrade kit and pull forward to release it. Repeat on other end, then pull the entire kit forward to remove it from the shelf.

   **Note:** If positioning the spudger is difficult, insert a small flat-blade screwdriver between the upgrade kit and trough bracket. Use the screwdriver blade to wedge space to position spudger.

   **Caution:** Pull kit away from shelf slowly to avoid damaging internal components.

Removal Of Patchcords

1. Release the fiber connector by pulling on the connector body.

2. A spudger may be used for removal of patchcords.
Step 7 – Terminate Trunk Cables

High Density Trunks

1. Secure incoming cables to 2U shelf using either the separately orderable shelf mounted brackets or the rack mounted brackets (RMB). For rack mounted brackets, follow instructions included with the brackets.

2. Mount trunk cables to rack mounted brackets or shelf mounted brackets as shown above.

3. Pull sliding tray to the rear to terminate trunk cable fanouts.

Low Density Trunks

1. When using 24F trunks, one trunk per module, secure 4 trunk cables (2 each side) aligned to each tray. Alternate adjacent cables between front column of shelf mount brackets and rear column of shelf mount brackets as shown.

2. Rotate shelf mounted brackets as shown to provide more room to route trunks.

3. Pull sliding tray to rear to terminate 24F trunk cable fanouts.
Step 8 – Route Trunk Cable Fanouts

1. Mate MPO connector(s) on DM with those on trunk cable or ruggedized fan out.

2. Create 3-inch (76mm) loops with cable to manage excess slack. Create 3-inch (76mm) counter clockwise loops with cables feeding distribution modules A and B, and clockwise loops with cables feeding distribution modules C and D.

   **Note:** Secure cables with hook-and-loop ties and bundle with cable tie to “T” shape bend limiters on sides.

Step 9 – Install Rear Door

1. Mount rear door to shelf by lining up one spring plunger to hinge hole and snapping-in the opposite side.

2. Pivot door to secure with thumb latches.
Step 10 – Tray Identification

1. Break-off the tray identification numbers.

2. Insert front tray ID between lenses, starting with tray 1 at the bottom.

3. Insert rear tray ID at center slot of each tray starting with tray 1 at the bottom.
4. Install fiber ring by inserting tab under lance and engaging the front of the fiber ring to the front stiffener slot. **Note:** To remove the fiber ring, use a flat blade screwdriver to push on the latch to unlatch the fiber ring at the front.

Step 11 – Install Port Designation Label

1. To print a designation label, go to: [http://www.commscope.com/Resources/Labeling-Templates](http://www.commscope.com/Resources/Labeling-Templates) and scroll down to the **360 UHD Shelves** and select the proper label template. **Note:** Labeling website has three options for printing labels: 2-row label, 12-port label, or underside patch cover label.

2. Use **Excel®** to record fiber routing information on designation label.

3. Print label on 8.5” x 11” (letter) paper provided.

4. Slide port label into lens port sleeve located at the front of the patch cover as shown.

5. For additional labeling, apply patch cover label to underside of patch cover.
